LUXURY IS A CHOICE.
We believe in nature, and we respect it. We have chosen to produce Dinamica®, the first and only microfiber that guarantees eco-sustainability along its whole production cycle.
Established in 1997, Miko S.r.l. is the Italian company which produces Dinamica®, the first ecological microfiber of high performance for many sectors of application.

Also quoted in the Eurispe Report 2008 among the best Italian Excellence, Miko is partner of Asahi Kasei, a leading Japanese company, which provides the raw base for the production of Dinamica®.

In the past years Miko, which started as a producer of non-woven fabrics for the furniture sector, has broadened its product range to respond to the demands of other areas of application including the automotive sector. Today, internal car coverings constitute the 90% of Miko’s production and represent a strong growing market.

In 2015, Miko was acquired by Sage Automotive Interior, one of the world’s leading providers of automotive bodycloth with headquarters in South Carolina (U.S.).

The whole Group including Miko was bought in July 2018 by Asahi Kasei. Now the complete production process of Dinamica®, from the raw material up to the finished product, is under the same organization.

Miko considers the respect for the environment and sustainable development strategic factors in organizing and developing its activities and in consolidating its leadership in the market. «For us the sustainable development is a systematic approach to growth and to manage the social capital for our welfare and for future generations.» says Lorenzo Terraneo, CEO of Miko.
Today, although internal car coverings constitute the main sector of use for Dinamica®, Miko is active also in the aeronautical, furnishing and contract, marine and fashion sectors.
A leading company in its sector, Miko specializes in the production of microfiber with high technological content. Quality raw materials, constant investment in R&D, and continuous development of our manufacturing systems ensure a product with unique aesthetic characteristics and highest performance values compared with those of market standards. The advanced production system covers all phases of working, and allows the company to continue to offer new types of product with high differentiation.
Starting from February 2018, Miko has obtained the IATF 16949:2016 certification which replaces the old ISO/TS 16949 specification. This proves that the company’s process is the most updated quality management system within the car industry. The company follows the most modern systems of management together with a constant control of the production process giving a guarantee over the quality of the resulting products.

This is the latest step taken on the path of quality control which Miko began in 1999 when it achieved the standards for UNI EN ISO 9002:1994 and furthermore in 2004 obtaining the UNI EN ISO 9001. Moreover, in order to improve its environmental performance, Miko has met all the requirements of the UNI EN ISO 14001 standard in July 2005. This certification is the best internationally recognized referral dealing with environmental management systems: it guarantees that the system is according with all sector’s rules and laws and also company’s commitment to continually improve its environmental politics and performances.
Dinamica® is unique. It takes you into a new realm, which is exclusive, elegant, beautiful, charming, able to provide pure emotions. Dinamica® is more than what you see. It is the spendid part of you.

Dinamica® is the ecological suede made from recycled polyester that ensures a low level of polluting emissions and energy consumption during production. The recycled polyester contained in Dinamica® derives from polyester fibres (T-shirts, fibres, etc.) and PET (bottles, plastic, etc.). Recycling polyester means reducing energy consumption and CO₂ emissions into the atmosphere by 80% compared to the traditional petrol-based polyester production process. The production of Dinamica® uses an exclusive water-based process developed by Asahi Kasei and a water-based needle punching process which does not damage the fibers. Dinamica® is designed for easy disposal, and is 100% recyclable at the end of its useful life.
As evidence of Miko’s commitment to the environment, Miko won the Italian Environmental Business Award 2011 as **Best Product of the Year**, while in July 2013 the company was awarded as **National Champion** for Italy in the 2013/14 European Business Awards and selected by the jury to run for The Millicom Award for Environmental & Corporate Sustainability category.

The microfiber is immersed in a bath of water-borne polyurethane, to which - in contrast with normal manufacturing cycles - no solvents harmful to the health and environment have been added. This process compacts the fibers, conferring properties of elasticity and resistance. Furthermore, the use of neutral, **non-toxic dyes** and **recycled polyester** is a further guarantee of the natural approach adopted respecting the health and the environment.

The eco-suede for people who respect the world in which they live.

As evidence of Miko’s commitment to the environment, Miko won the Italian Environmental Business Award 2011 as **Best Product of the Year**, while in July 2013 the company was awarded as **National Champion** for Italy in the 2013/14 European Business Awards and selected by the jury to run for The Millicom Award for Environmental & Corporate Sustainability category.
Dinamica® was born in order to overcome today’s standards and to become a model for future innovation.

The Dinamica® line is absolutely new in its sector in view of its innovative characteristics, which involve all the microfiber’s aspects and parameters. The advantages it offers compared with the competition are many and highly noteworthy, and reflect the meeting of many recognized standards. Dinamica® is the result of wide experience and years of research, and is designed to become the reference product on the world market, for many types of application.

The conformity to Oeko-Tex® Standard 100 for the product class 1 for upholstery applications guarantees Dinamica®’s absolute safety and high quality, designed for all ages that come into direct contact with the skin.
Over the years, Miko has been constantly and actively committed to respecting the environment and the sustainability, both in carrying out its production and in taking its strategic choices. For this reason, since the year 2010, it has followed an approach towards Life Cycle Thinking and credible communication of its products against greenwashing. In July 2012, Dinamica® Auto obtained the EPD® certification. This step has laid the basis of a bigger project that was completed in 2013 with the EPD® Process Certification. Nowadays, an environmental team is dedicated on collecting the environmental data of a wide range of Dinamica® products with the scope to independently release new EPD®s for all sectors of application.

In specific productions, Dinamica® is guaranteed antistatic and fire-retardant in conformity with the most stringent standards.

Transparent in our environmental communication

Registration nr. S-P-00351 and S-P-00788
We are passionate about excellence. The values we trust characterize our product in all its parts, from concept to substance, through appearance and performance.

EXCLUSIVE SOFTNESS AND COMFORT
You should feel the excellent touch of Dinamica®. Pure and sensual, but also anallergic and breathable. The outstanding care taken in the eco-technological process used to produce the microfibers provides unique sensations.

TOP-QUALITY PERFORMANCE
We grant advanced technology, with high technological content, throughout the entire manufacturing process. Quality raw materials, constant investment in R&D, and continuous development of our manufacturing systems ensure a product with unique aesthetic characteristics and highest performance values.

SPLENDID COLORS
Time passes but colors remain. Dinamica® covers all degrees of the color scale. All bright, sunlight resistant and not fading with time. The secret? It’s the advanced technology of the production cycle. With the possibility to personalize all colors, Dinamica® is able to fulfill any taste!

EXTRAORDINARY RESISTANCE
Dinamica® is tear-resistant also at the seamline, thanks to its three-layer structure. It can be used for any type of upholstery without additional backing. Dinamica® is resistant to abrasion, keeps its constant quality over time, and is free from pilling effect. In specific productions, it is guaranteed antistatic and fire-retardant in conformity with the most stringent standards.
Dinamica® is easy to wash and can be cleaned directly in place. Please, visit our web site for cleaning and maintenance instructions.

**LUXURY APPEARANCE**

Dinamica® is the best alternative to leather or in combination with it in terms of elegant look, soft touch and natural comfort. Not only does its appearance make it suitable for sport and dynamic taste, but also for more classic interiors.
Versatility to discover. Outstanding characteristics make the Dinamica® line a top product in all sectors. Through offering the very best of itself.

Owing to its innovative structure and excellent qualities - which can literally be touched - Dinamica® is extraordinarily versatile in use: through application of very special and meticulously researched techniques, the microfiber material is adapted to the technical requirements set in each instance by the individual sector of use. Dinamica® can thus be used in the most varied of applications, each time fully meeting the most specific demands of leading international enterprises.

**AUTOMOTIVE**
Dinamica® Auto, Auto Stretch, Wide, and Nabuk meet the requirements of the automobile industry.

**AVIATION**
Dinamica® Aviation is the best proposal for comfort, even long-term. And extremely light, too.

**UPHOLSTERY**
Extra comfort and elegant feeling for the home of your dreams with Dinamica® Classica, Melange, and Silk.

**CONTRACT**
Spirit of flexibility. And flameproof guaranteed.

**MARINE**
Natural elegance combined with quality finishes and colors are ideal for the nautical scene.

**FASHION**
Stylish, glamorous and smart: Dinamica® seduces the fashion world.
Miko makes use of Fedrigoni X-Per paper, ecological and recyclable paper.
